

George Koufie

Jacksonville, NC | (919) 902-5779 | gkoufie224@gmail.com | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY:

Solutions Architect and cloud infrastructure professional with 3+ years of IT operations experience and hands-on experience designing, building, and validating solutions across AWS and Azure. Experienced in translating technical requirements into secure, scalable, and maintainable architectures spanning cloud networking, serverless applications, infrastructure as code, APIs, Kubernetes, disaster recovery, secrets management, and AI/data integrations. Skilled in AWS, Azure, Terraform, Python, Docker, Kubernetes, CI/CD, networking, security, and automation, with a strong troubleshooting foundation and a focus on architecture decisions, technical trade-offs, reliability, and operational maintainability.

EDUCATION:

Per Scholas AWS re/Start Training Jacksonville, NC	Nov. 2026
This rigorous, full-time, 15-week virtual re/Start Training program provides an understanding of Cloud Computing Services, Networking, Databases, and AWS Cloud Management, Monitoring, and Governance Services. Attended weekly professional development to develop a personal brand, create a strong technical resume, practice professional communication and collaborative skills, and develop skills required to succeed in a technical environment. Course Focus: Linux, Python, Auto Scaling, EC2, Lambda, Shell Scripting, Cloud Concepts, Network Firewall, AWS Systems Manager, Redshift, and DynamoDB.	
Western Governors Univ. Bachelor of Science in Cloud Computing Salt Lake City, UT	May 2025
James Sprunt Comm. Col. Associate of Science in Information Technology Kenansville, NC	May 2023

CERTIFICATIONS:

CompTIA A+	Aug 2024
CompTIA Sec+	Nov 2023
AWS Certified Cloud Practitioner	Jan 2024
AWS Certified Solutions Architect - Associate	July 2025
Microsoft Certified: Azure Fundamentals	July 2024
Microsoft Certified: Azure Administrator Associate	July 2025

TECHNICAL SKILLS

AI & System Integration: Model Context Protocol (MCP), MCP Servers, AI Agents, LLM Tool Integration, REST APIs, API Integration, SQL, SQLite, Azure SQL, Cosmos DB

Cloud Platforms: AWS (EC2, Lambda, VPC, IAM, S3, EKS, RDS, DynamoDB, CloudWatch, CloudTrail); Microsoft Azure (Azure Site Recovery, Azure SQL Database failover groups, Recovery Services vault, Virtual Machines, Virtual Network, Entra ID, Storage Accounts, Azure SQL, Cosmos DB, Azure Monitor)

DevOps & Infrastructure as Code: Terraform, GitHub Actions, Jenkins, Azure DevOps, AWS CodePipeline, AWS CloudFormation, Azure Bicep, ARM Templates

Containers & Platform Engineering: Docker, Kubernetes, Amazon EKS, AKS, Helm, Argo CD, GitOps

Monitoring & Logging: Prometheus, Grafana, Amazon CloudWatch, Azure Monitor, Audit Logging

Scripting & Automation: Python, Bash, PowerShell, YAML

Networking & Security: TCP/IP, DNS, VPC/VNet, Subnets, Routing, VPN/IPsec, Transit Gateway, IAM, RBAC, MFA, OIDC, Least Privilege, Access Control

Reliability & Recovery: Disaster Recovery, Backup & Recovery, RTO/RPO, Failover Testing, Infrastructure Monitoring, Root-Cause Analysis

Operating Systems: Linux, Windows, Windows Server

PROFESSIONAL EXPERIENCE

EpixDevo	
Solutions Architect (Contract)	July 2026 -Present

- Architected a serverless AWS application (API Gateway, Lambda, DynamoDB, Cognito) and redesigned its frontend delivery from direct public S3 hosting to a CloudFront + Origin Access Control architecture with a custom domain and ACM-issued TLS, eliminating all direct public access to storage (Volunteer Connect)
- Designed a two-region hybrid network architecture (AWS Site-to-Site VPN, Virtual Private Gateway, static routing) to simulate an on-premises-to-cloud connection, resolving two infrastructure issues that produced identical symptoms but different root causes — one kernel-level (IP forwarding), one network-boundary (security group scope for transit traffic) (Site-to-Site VPN)
- Evaluated self-hosted HashiCorp Vault on AWS versus managed secrets alternatives, designing a secrets-management architecture scoped to single-IP network access rather than broad ingress rules (Vault/Terraform pipeline)
- Identified a cross-account AWS credential configuration risk that could have deployed duplicate infrastructure into an unintended AWS account; mitigated the risk by explicitly scoping Infrastructure-as-Code deployments to the intended account rather than relying on ambient shell credentials.

Onslow County Government | Jacksonville, NC

Cloud Support Engineer

Feb 2026 - July 2026

Technology Support Specialist

Sept 2024 - Feb 2026

- Resolved complex infrastructure and technical issues across Windows, Active Directory/Entra ID, Microsoft 365, networking, cloud services, endpoints, and enterprise applications in an SLA-driven environment.
- Performed root-cause analysis on escalated Tier I/II incidents, isolating issues across operating systems, networking, authentication, permissions, applications, and infrastructure before implementing resolutions or escalating with documented diagnostic findings.
- Troubleshoot network and connectivity issues involving DNS, TCP/IP, authentication, permissions, file shares, and access to enterprise and cloud-based services.
- Supported identity and access operations across Active Directory and Microsoft Entra ID, including account provisioning, group membership, permissions, authentication, and access troubleshooting.
- Created and maintained technical documentation, troubleshooting procedures, and knowledge-base content for recurring issues and operational processes.
- Collaborated with infrastructure and engineering teams to diagnose application, networking, identity, endpoint, and cloud-related issues while minimizing disruption to business operations.

CarolinaEast Health System | New Bern, NC

IT Operations Specialist |

Aug 2023-Sept 2024

- Independently resolved 90%+ of 40–50 weekly Tier I/II incidents across Windows, Microsoft 365, identity services, networking, hardware, software, and business applications in an enterprise environment supporting 1,000+ users across county departments.
- Managed 30+ weekly identity and access requests across Active Directory, Microsoft Entra ID, and Microsoft 365, including user provisioning, group membership, permissions, account modifications, deactivation, and authentication support.
- Troubleshoot Active Directory permissions and file-share access issues, identifying and resolving problems involving user accounts, group membership, access permissions, authentication, and network connectivity.
- Performed root-cause troubleshooting across endpoint, application, network, authentication, and access-related incidents, resolving issues within scope and escalating complex problems with documented diagnostic findings.

CLOUD ENGINEERING PROJECTS

Vault Secrets Pipeline on AWS | Terraform, HashiCorp Vault, AWS (EC2, VPC, SSM)

Oct 2026

- Designed and deployed a self-hosted HashiCorp Vault secrets-management architecture on AWS using Terraform, Amazon EC2, VPC networking, and restricted security-group access.
- Designed machine-to-machine authentication using Vault AppRole, allowing automation to authenticate independently of human credentials.

- Architected a secure secrets-delivery workflow from Vault → automation pipeline → AWS Systems Manager Parameter Store, storing sensitive credentials as encrypted **SecureString** parameters for application consumption. [GitHub Repo](#)

Azure Disaster Recovery Drills | Azure Site Recovery, Azure SQL failover groups, Terraform, Azure CLI Sep 2026

- Designed and executed two cross-region disaster recovery architectures using Azure Site Recovery and Azure SQL failover groups, defining measurable RTO/RPO objectives before testing.
- Validated architecture through live failover testing, achieving 2m34s VM recovery against a 15-minute RTO target and 12.9s Azure SQL failover against a 60-second target.
- Evaluated recovery behavior under live database writes, measuring approximately 2.3 seconds of data loss against a 5-second RPO target and zero-row loss during planned failover.
- Documented architectural trade-offs, recovery dependencies, failure scenarios, and remediation findings to demonstrate how DR requirements translate into technical design decisions [GitHub Repo](#)

Hybrid Cloud Network Architecture | Terraform, AWS Transit Gateway, Site-to-Site VPN June 2026

- Designed a hybrid connectivity architecture using AWS VPC networking, Site-to-Site VPN/IPsec, routing, and security controls to model connectivity between private infrastructure and AWS.
- Troubleshoot connectivity failures across multiple architectural layers, distinguishing between Linux IP forwarding and AWS security-group boundaries despite similar external symptoms.
- Converted manually provisioned AWS networking components into Terraform-managed infrastructure, improving repeatability, documentation, and environment recreation.
- Applied network architecture concepts including CIDR planning, routing, security boundaries, VPN connectivity, and infrastructure validation. [GitHub Repo](#)

EKS Platform & Reliability Engineering Lab | AWS EKS, Fargate, Terraform, Terragrunt, Kubernetes | Sept 2026

- Built and deployed a Fargate-only Amazon EKS platform using reusable Terraform modules and Terragrunt, provisioning multi-AZ VPC networking, private application subnets, EKS Fargate profiles, and automatically bootstrapped remote state. [GitHub Repo](#)
